**Abstract:** *this article gives information about how to young children get used to listening form early childhood. Sometimes it is agreed that learning a second or any foreign language may seem exhausted or can be found as a time wasting activity since it requires a plethora of time from the learner. It is all because teachers do not use proper materials in order to keep the learner motivated learning new things in the classes. Besides, the teaching methods and techniques the teacher employs may not be in consonance with the learner's needs, interests, level and aptitude.*

**Keywords:** *listening games, new method, new activities for children to learn language through audio materials.*

## ПРЕИМУЩЕСТВА И СТРАТЕГИИ ИСПОЛЬЗОВАНИЯ АУДИОМАТЕРИАЛОВ В АНГЛИЙСКИХ КЛАССАХ Раджабов М.У.<sup>1</sup>, Отаджонов Х.Ш.<sup>2</sup> (Республика Узбекистан)

**Аннотация:** *в данной статье рассказывается о том, как маленьким детям привыкнуть слушать с раннего детства. Иногда соглашаются, что изучение второго или любого иностранного языка может показаться исчерпанным или может быть расценено как трата времени, так как от ученика требуется много времени. Это все из-за того, что учителя не используют надлежащие материалы, чтобы мотивировать учащихся учить новые вещи на уроках. Кроме того, методы и приемы преподавания, которые применяет учитель, могут не соответствовать потребностям, интересам, уровню и способностям учащегося.*

*Ключевые слова: игры на слух, новый метод, новые занятия для детей по изучению языка с помощью аудиоматериалов.*

**INTRODUCTION:** Because each student has his own cognitive learning style: auditory, visual, kinesthetic and etc. Hence, carrying the authentic teacher-led lessons with chalk and blackboard, teachers should use materials and techniques in a manner that is consistent with the learner's needs and interest. And the best approach in this case what can stimulate, motivate and arrest the learner's attention during the classes is considered to be the appropriate use of audio aids. Listening to songs or audios in English classes gives many benefits to different people. Everyone receives it differently. As people used to listen to songs and noises when they were young, after period of time people do not come across difficulty while learning language which they listened the language's sound or songs before.

Everybody can learn language, which they are speaking and using, by listening every single words. For example, toddlers and babies can learn everything by listening. From birth till speaking some words, they only listen their parents' conversation and listen the song which is near him or her. Everyday they learn at least 10 words and they recognize items. After some time, they utter the words which they have listened. Then, they try to make compound words to make their speech clear. That time they only make short sentence as much as possible. Afterwards, their brain adapted to understand whole sentence by listening. Having realized sentence, they try to tell it as they listened. As can be seen, process of learning words consist of two stage: listening and speaking. When it comes to English classes, students can learn language easily by using audio materials during lessons. For instance, if teachers give children the thing that includes listening some words and retell them without not noting, which is look like a game, teachers check children's knowledge. Of course, this kind of activity make children study. In addition to this, listening songs with its lyrics have many advantages on children, which is recommended by scholar. The main reason behind this, while listening songs learners pay attention every word and learn how to pronounce. After a while, they repeat the song and sing with its minus version together.

Usage of multimedia audio materials in English classes work as powerful tool in this aspect to teachers arrest his/her attention during the instructional process when they may get bored doing visual tasks only. Audio-aids which consists of cassettes, cassette players, recorded materials, radio and etc. can be defined as models and devices that can be heard and give an image of something, somebody and some situations. There are still some other approaches of teaching the language to students, but this aid is cheap enough and it is always stated that it is cost for everyone to carry and can be played in necessary time and place. Moreover, as abovementioned audio aids greatly facilitate the learner's understanding of the linguistic as well as the communicative aspects.

“Teaching is listening, learning is talking”.[1] Proving this idea, it has important meaning which is related to both teaching and learning. First of all,

listening is crucial for both of them. In fact, if you teach learner about something new, they, firstly, listen and analyze it in their mind. After that they are given audio materials to do it. Then, they learn something new with their pair by talking and sharing their opinion about the lesson.

As a result they can be a knowledgeable person who plays important role in society. Also this types of person able to find work which promotes with high salary. Furthermore, they can get qualification with a high level and likely to find prestige job which pays a higher salary. Having this kind of job also require to be a responsible who works with honor. They also contribute to the society positively by helping and improving condition of country. Nowadays, schools aim to teach young people to be independent. If children study independently, they may find a way to learn something new instead of wasting time with unnecessary work. Providing that children have ability to speak without difficulty and listen to English speaking person perfectly, they may study abroad and will not face problems there. Having more this kind of people has more positive side than not having. Even though government prefer to work with skillful person and make them current member of the society. Because, government's situation may advance with helping of the people.

Nowadays, in our society, there are majority of people whose work related to language. For example, synchronic interpreter have ability to listen words and sentence and translate it into other languages the same time. They get this qualification by hard working in the school or university.

There is a game which is played among youngster who are about 5 to 10, is pushing the alphabet when it tells letters. Obviously, it can improve once ability to remember the letters. Then, it turns next part which is related to finding a picture and match it while listening the pictures' name or explanation. So, this types of game make brain work and work harder than before. Additionally there is another game which requires more time to do it. During this game, children listen and write down words without mistake at the same time. This may be somehow difficult to catch words. If we do it regularly and follow the rule of game, we will have got a good outlook on life and improve our mental ability. In fact, it is proved that making a mental note and catching ideas of text is lead to pay attention to something so that you will remember it later.

Without any doubt, we can adapt the world by helping of the listening (for example baby), audio scripts as well. Generally some people use mp3 and audio to listen something where ever they are. While walking or running, and while having a rest or just sitting, listening some kind of tapes crib is useful way to get succeed.

**RESULTS OF THE RESEARCH:** These days more and more people are making the choice to teach the children handing out audio materials while others prefer to teach children by only pen and paper lessons. It is certainly true that one of the main aims of audio materials is to success in the way which once preference. However pen and paper lessons are good as well. Yet, when it comes to compare both of them audio materials have more advantage than latter. Therefore, as I mentioned above, using audio materials and tape scribes is a way

to make children study and make children have a good mood instead of bad during the lessons.
