

## **AUTISM RESULTING FROM CHILD'S ANCESTRAL PROBLEMS**

**Dimitroshkina L.I. (Russian Federation)  
Email: Dimitroshkina511@scientifictext.ru**

*Dimitroshkina Liana Ivanovna - Member of the Professional Psychotherapeutic League of Russia, Director,  
AUTONOMOUS NON-PROFIT ORGANIZATION  
INSTITUTE FOR THE STUDY OF AUTISM, IZHEVSK*

**Abstract:** *the article gives a brief overview of the autism epidemiology status with transposition for the next 16 years.*

*Here is the presentation of the theory of ancestral patterns leading to autism, including the statistics for the phenomena initiating those malicious ancestral patterns in the different parts of the world with diverse demographics and various traditions of family life.*

*The information about the experience of adjusting the situation with the help of family constellations technics is given based on the experimental group of autistic kids' moms.*

**Keywords:** *autism, psychology, abortions, divorces, family constellations, malicious ancestral pattern.*

## **АУТИЗМ, ОБУСЛОВЛЕННЫЙ НАСЛЕДСТВЕННЫМИ ПРОБЛЕМАМИ РЕБЕНКА**

**Димитрошкина Л.И. (Российская Федерация)**

*Димитрошкина Лиана Ивановна - член профессиональной психотерапевтической лиги России, директор,  
Автономная некоммерческая организация  
Институт изучения аутизма, г. Ижевск*

**Аннотация:** в статье представлен краткий обзор текущего состояния заболеваемости аутизмом в мире с транспонированием на ближайшие 16 лет.

Выдвигается теория о родовых программах, приводящих к появлению аутизма. Собрана статистика явлений, наиболее явно иницирующих вредоносные родовые программы, в том числе по странам мира с различными демографическими ситуациями и семейными традициями.

Приведена информация об опыте корректировки ситуаций с применением техник системных семейных расстановок в работе с мамами аутичных детей в рамках организованного автором проекта «Победим Аутизм».

**Ключевые слова:** аутизм, психология, аборты, разводы, семейные созвездия, злонамеренная наследственность.

The Institute for the Study of Autism presents to the scientific community the new theory about ancestral and systemic problems causing autism.

I am Liana Dimitroshkina, the Director of the Institute for the Study of Autism and a member of the Professional Psychotherapeutic League of Russia. My major competence is family constellations, I also teach the basics of constellations to the students majoring psychology. For many years, I used to work with women consulting them in terms of relationship — until we have suddenly discovered that women therapy within the Family Happiness Institute (my major project by that moment) results in positive changes in their autistic children condition, including some cases of official withdrawal of the diagnosis. Therefore, I began looking at the causes of autistic spectrum disorders from a very different point of view — from the position of the ancestral or family systems.

The first law of the family systems is the Law of Belonging.

According to it, our family system includes all the people our family members have ever had a sexual relationship with, no matter any interception used. This means all those people can influence the fate of the future generations in the family. Our family system also includes all the children, both born and unborn due to abortions.

It is exactly abortion prevalence and multiple sexual relations in the social groups we have studied that correlate with the autism prevalence.

*Table 1. Statistics on divorces, abortions and autism prevalence in some countries around 2006 and 2014*

	USA as a whole	Amish (strict religious community in the United States, more than 300 thousand people)	Hong Kong	Portugal	United Arab Emirates
<b>2006</b>					

Divorces (per 1000 population)	3,7 [1]	0,28 [4]	2,538 [7]	2,2 [10]	0,06 [13]
Abortions (per 1,000 women of childbearing age.)	24,38 [2]	0 [5]	9,73 [8]	0,66 [11]	1 per 1000 live births [14]
Autism diagnosed (per 1000 children)	9 [3]	0 [6]	1,68 [9]	1,67 [12]	0 [15]
<b>2014</b>					
Divorces (per 1000 population)	3,2 [16]	0 [19]	2,8 [22]	2,1 [25]	0,06 [28]
Abortions (per 1,000 women of childbearing age.)	17,47 [17]	0 [20]	8,13 [23]	10,02 [26]	1,6 per 1000 live births [29]
Autism diagnosed (per 1000 children)	22,4 [18]	0,3 [21]	37,2 [24]	7,4 [27]	2,6 [30]

While collecting the data we suddenly came across a country where abortions had been prohibited by the state law and the divorce rate seemed to be among the lowest in the world. Still the country shows significant autism prevalence.

*Table 2. Statistics on divorces, abortions and autism prevalence in Chile around 2006 and 2014*

	<b>Chile</b>
<b>2006</b>	
Divorces (per 1000 population)	0,1 [31]
Abortions (per 1,000 women of childbearing age.)	0,45 [32]
Autism diagnosed (per 1000 children)	3,4 [33]
<b>2014</b>	
Divorces (per 1000 population)	0,2 [34]
Abortions (per 1,000 women of childbearing age.)	0,5 [35]
Autism diagnosed (per 1000 children)	3,4 [36]

That fact might be confounding. However, if we take a deeper dive to the history of Chile and its social organization, we find the following:

"In the period 2000 to 2004, abortion was the third leading cause of maternal mortality in the country, accounting for 12% of all maternal deaths. While there are no accurate statistics, it is estimated that between 2000 and 2002 there were between 132,000 and 160,000 abortions in the country" [31].

The Chileans seem to be quite advanced. Despite strict legislation rules for divorces until 2005 making them merely possible (that is exactly what the official metrics show), many spouses just separate and divide their property. That is common practice. After separating from the legal spouse, the Chileans form new families. Some opinions state that almost half the Chilean children nowadays are born from these "not-yet-divorced" parents in their new families [32]. A lot of children remain unborn due to abortions.

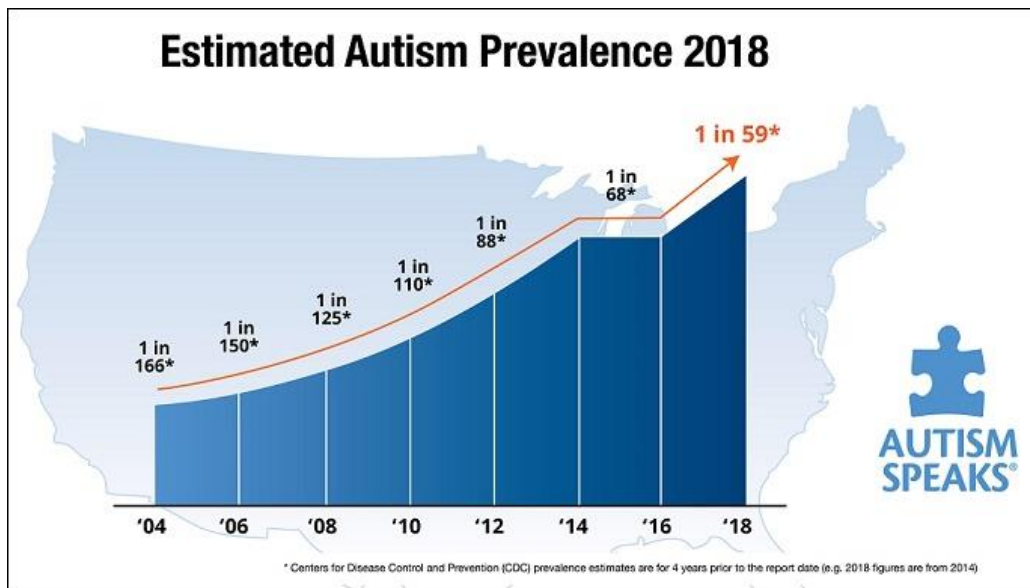

They are not like the Amish people who reject the very idea of the induced termination of pregnancy. The Chileans are integral part of the modern world culture. It was just The Evil Government preventing them from the normal rights for abortions. The women in Chile had efficiently struggled for those rights and they succeeded — first through the disobedience and illegal abortions, then arising the social and the political attention in the world. They won finally and the government adopted new laws for the induced termination of pregnancy.

Among those who lost that battle we see the Catholic church that used to protest frantically and the future of the Chilean nation itself in terms of some 15 to 20 years.

It makes no difference for the ancestral pattern if mothers decide to kill their unborn children in a legal or illegal way. However, the memories of the illegal abortions tend to transfer to the unconscious even faster. Therefore, that might affect the situation in a stronger way.

The family system gets series of messages about mothers killing their children — and that is understood as the sign for the family line termination.

Each message of this kind becomes a Malicious Ancestral Pattern (MAP). It joins all the other MAPs coming from other families bound through the sexual promiscuity. Gradually a family might collect some critical number of those MAPs and they would wrap a newborn child just as Lilliputian threads wrapped Gulliver, causing autistic spectrum disorders.

*Fig. 1. Estimated autism prevalence according to the Autism Speaks organization*

As a result, we see that autism prevalence is rising exponentially in most civilized countries where divorces and abortions became common. Transposing the growth curve, we can see the strong probability of ASD diagnosed with half the children by 2030 and almost 100 percent prevalence of autism in the consequent five years.

Therefore, we get all the chances to see the downfall of the so-called civilized world where the idea of monogamous and exclusive relations between spouses has been totally extinguished and substituted by free relationships and widely spread social permission to kill the unborn children.

Is there any possibility of positive dynamics?

It is.

Of course, we are realistic about our unassertive abilities to change the issues all the world religions failed to protect. However, we still manage to do something.

As of the beginning of May 2019, we have 186 mothers of children with ASD participating in the experimental therapy program. Within the framework of the program including practices from four dozens psychotherapeutic competences we work just with the mothers tackling the deepest layers of their unconscious. The whole program lasts for about a year.

We get positive dynamics with more than 90 % of the children. More than a half do show significant improvements. We have 4 % of the children whose diagnosis has been officially withdrawn.

Most of this experimental group is somewhere at the halfway. Our program goes on and we continue to analyze the outcomes.

For your reference, none of the multiple practices for autistic children existing nowadays gives the guaranteed result. In general, ASD is considered incurable. No matter what you feel after reading this article, I do ask you to wish success to the women struggling for their children's health with the help of our program.
