Аннотация: в данной статье рассматриваются вопросы использования инновационных технологий на уроках. С тех пор, как Узбекистан стал независимым, произошли радикальные изменения в различных сферах жизни страны, а также в системе образования. Наша страна нашла свое подходящее место в социальной и экономической жизни мира, и в этом плане большое внимание было уделено молодому поколению и 21-му. век называется «период интеллектуальной молодежи». Наш первый президент И.А. Каримов был для нас хорошим лидером, чтобы сделать Узбекистан известным в мире как одну из развитых стран, и он достиг всех своих целей и целей людей.

Ключевые слова: радикал, сферы, интеллектуальный, духовный, экономический, культурный, поколение, сущность, детерминанты, кросс-коммуникация.

Uzbekistan is a place where spiritual, economic, cultural, social and educational fields of life are advancing at a high speed.

It is noted that in the framework of the Law of the Republic of Uzbekistan "On education" and the National Program for Training in the country, a comprehensive foreign language teaching system, aimed at creating harmoniously developed, highly educated, modern-thinking young generation, further integration of the country to the world community, has been created [1].

Modern pedagogical technologies are effective and helpful in teaching so Education provides creative inspiration for the spirituality of the people of Uzbekistan. It helps us discover the best abilities of the up and coming generation, while continuously improving the skills of professionals. Being taught according to pedagogical technologies, we have opportunities to think independently about the essence of ideas of a certain literary work, to analyze the content of solution Young people, with their budding talents and thirst for knowledge, are understanding spirituality through education [2].

Our President is always mentioning that without foreign languages no organization, no person can develop fast. During the visits to all the regions of our country, Islam Karimov had said that all the teachers should know foreign languages and computer technologies.

Education is one of the fundamental determinants of social and economic progress of any nation and its role is prominent in every aspect of our lives. Our government pays huge attention to the education of the younger generation. As our President pointed out the youth is not only the hope and future, but also a decisive force of today and tomorrow. So, today all the doors are open for us. International grants afford us to receive or continue education in the leading educational and scientific centres of high-developed countries of the world.

Nowadays much attention has been given to implementing knowledge in computer technologies and foreign languages, especially English. The English is

regarded as the international language in this global world, the language of business, diplomacy and cross-communication. English is very important all over the world. Communication is very crucial in any field, whether it is a conversation between pen friends, whether it is business, politics or economics. Hence, it is going to be hard to thrive in this world without knowing English. The need for studying foreign languages is becoming one of the most acute questions standing in front of each state. In the present day, our President, taking into account this importance for our state, takes the necessary measures on expanding and improving the English language proficiency. Our government creates a favourable atmosphere and all conditions for the younger generation for learning foreign languages. So, all the state educational centres are provided with the latest innovative technologies, methodological materials and language laboratories as well.

Moreover, on December 10, 2012 the head of our state signed the decree “On measures to further improvement of foreign language teaching system”, in consequence of which starting from 2013-2014 school year foreign languages, mainly English, are being taught from the first year of schooling throughout the country. The National TV radio Company, State Committee for communications, informatisation and telecommunication technologies, Agency for Press and Information of the Republic of Uzbekistan are tasked to prepare and broadcast language-learning programs, significantly increase access to international educational resources “Ziynet” educational network, promote publication of foreign language textbooks, magazines and other materials.

Also we are being taught by very well-educated, skillful and intelligent teachers with high quality system. Every lesson our teachers use projectors, computers, one of the new technology is to explain the subject very well. This is more useful to understand and to assimilate very quickly.

Modern pedagogical technologies in teaching based on the following :

- To achieve the results according to the aim of teaching
- To secure the superiority of the learners who take part in the process of teaching

- To achieve a venture management in the teaching process

In the process of teaching every teacher can choose required types and methods according to the subject and the theme:

1. Newspaper commentaries
2. Foundation
3. Panorama
4. Interview
5. Detective and etc.

“We have to add wings to our talented and devoted children to reach the peaks of knowledge and profession”. “It is our sacred duty to find talented and clever youth and to foster them as patriots of the Motherland”- said I.A. Karimov.
